Simple BRD: ServiceNow Ticket Analysis in Excel

Prepared by: Jasmine | **Date:** 16 October 2026 | **Data:** servicenow_m2_accelerated.csv (2,000 problem tickets)

1. Goal

Turn the raw ServiceNow problem-ticket file into an Excel dashboard that shows managers how big the backlog is, what is urgent, and which teams carry the most work.

2. Users

IT Operations Manager and Team Leads, who need a quick view without reading 2,000 rows.

3. Questions the Dashboard Must Answer

1. How many tickets are there, and how many are still open?
2. How many Critical and High tickets are unresolved?
3. Which team has the most tickets?
4. How old are the open tickets?
5. Which problems and causes keep repeating?

4. Data

Column	Meaning
Problem Ticket	Unique ticket ID
Problem Statement	Short title of the problem
Description	Detailed text (noisy, use only for reference)
Cause	Stated root cause
State	Open, In Progress, Awaiting Info, Resolved, Closed

Column	Meaning
Priority	Critical, High, Medium, Low
Assigned Team	CMDB Team, Database Operations, Backup & Recovery, Infrastructure, Server Management, Network Operations
Created Date	30 Jul 2025 to 27 Oct 2025
Age (Days)	Days since creation (not resolution time)

5. Requirements

ID	Requirement
R1	Import and clean the CSV (correct data types, no duplicates, trimmed text)
R2	Add helper columns: Status Group, Age Bucket, Month, Problem Category
R3	Calculate KPIs: Total, Active, Resolution %, Critical unresolved, Average age of active tickets
R4	Build PivotTables by State, Priority, Team, Age Bucket, Month, Problem Category and Cause
R5	Build charts from the PivotTables
R6	Build one dashboard sheet with slicers for Team, Priority, State and Month
R7	Write an insights sheet with findings and recommendations

6. What To Do (Steps)

Step	Task
1	Import the CSV with Power Query (Data > From Text/CSV) and load as a table
2	Clean: set Created Date to Date, Age to Whole Number, trim text, check duplicate IDs
3	Add helper columns (Status Group, Age Bucket, Month, Problem Category)
4	Calculate the KPIs with COUNTIFS and AVERAGEIFS
5	Create the PivotTables
6	Create charts from the PivotTables
7	Assemble the dashboard: KPI cards on top, charts below, slicers connected to all
8	Write the insights sheet
9	Test the numbers against the check values below, then export the dashboard as PDF

7. Helper Column Rules

- **Status Group:** Open, In Progress, Awaiting Info = Active. Resolved, Closed = Completed.
- **Age Bucket:** 0–15, 16–30, 31–60, 61–90 days.
- **Problem Category:** the service name at the start of the Problem Statement (for example Web Proxy, Active Directory, Network Monitoring).

8. Check Values (Your Numbers Must Match)

Check	Expected
Total tickets	2,000

Check	Expected
Active tickets	1,399
Critical and still active	213

9. Limits of the Data

- Age (Days) is days since creation, not time taken to resolve.
- There is no resolved date or assignee, so resolution time, SLA breaches and individual workload cannot be measured.

10. Final Deliverables

1. Excel workbook
2. One-page dashboard (PDF)
3. Insights sheet
